re:VISION
Laser & Cataract

**Refractive Lens
Exchange (RLE)**

re:VISION

Laser & Cataract

A Refractive Lens Exchange is a procedure virtually identical to cataract surgery (the most common operation in the Western World), only for a slightly different reason. Instead of a cloudy lens in the case of cataracts, this procedure replaces your eye's clear, natural, but 'not ideally focused' lens with a custom designed artificial intraocular lens (IOL) to reduce your dependence on those annoying glasses.

As your own pre-cataract lens is removed with Refractive Lens Exchange, there will never be the need for cataract surgery in the future. Double win.

The Refractive Lens Exchange procedure is most suitable for people who suffer from presbyopia (need for reading glasses) and hyperopia (longsightedness), over the age of 45 years.

Advanced Technology for RLE

Having a refractive lens exchange is a painless, quick, proven method of restoring vision and be carried out by one of our experienced eye surgeons at our Re:Vision Sight Correction Centre in Auckland.

The RLE procedure is typically done with numbing gel (no injection), performed in a stitch-less manner and does not require you to wear an eyepad, allowing most patients to return to their normal activities within a day or so. Your surgeon will painlessly remove your

natural lens and replace it with a clear, ultra high-definition intraocular lens (IOL), which is customised to match your eye's prescription, successfully restoring your vision.

These modern IOLs last forever, remaining clear and stable and do not need replacing.

The RLE Surgery Specialists

As Auckland's RLE Surgery Specialists, having performed over 30,000 lens replacement procedures, at Re:Vision we use the latest high-definition vision intra ocular lens technologies. This includes Premium IOLs that help to reduce post-operative spectacle use.

1. Toric astigmatism reducing IOLs
2. Trifocal & Multifocal IOLs
3. Extended depth of focus (EDoF) IOLs, for those who would love a life with a whole new level of freedom from wearing glasses.

Easy Payment Options

We help our self-funded patients with finance options, explained on request. This Refractive Lens Exchange procedure is generally not funded by insurance as it is seen as an elective procedure.
