

(Peroxide-TATP Test)  
**Peroxide**  
**Tube #1**  
**DR-0040-1**

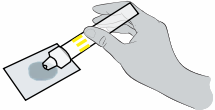

**Read  
Before  
Use**

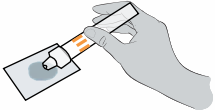

As a precaution, gloves and eye protection should be worn when handling substances and using test units. If a spill occurs, thoroughly rinse affected area with water. Keep out of reach of children. Store the tubes in a dark place, not exposed to light. All results are presumptive.

This test consists of two test tubes, which must be applied in order. **Test in sequence - Tube #1 → Tube #2.** Since the tubes contain enough liquid to test many samples, do not dispose of the tube until all desired samples are tested. For additional tests with the same tubes, take a new sheet of test paper from the pad to test the next sample.

Test Preparation	Substance		Traces	
	1	2	1	2
	Remove a sheet of test paper for every test from the dispenser.	Touch the test paper to the suspected substance.	Wipe the test paper across the suspected surface.	
				

Tube 1 Peroxide Test	Initial Use: With <b>thumb and forefinger</b> , squeeze Tube #1 until the ampule breaks.		Open the cap and apply a drop to the sampled area of the test paper.	
	3	4	5	6
				

Tube 1 Results	The appearance of an orange or yellow color indicates the presence of <b>Peroxide</b> .			
	If an orange or yellow color appears, testing is completed. If <b>no</b> color develops immediately, proceed to the next step.			
				

Tube 2 TATP/HMTD Test	Initial Use: With <b>thumb and forefinger</b> , squeeze Tube #1 until the ampule breaks.		Open the cap and apply a drop to the same place as Step #4.	
	5	6	7	8
				

Tube 2 Results	The appearance of an orange or yellow color indicates the presence of <b>TATP</b> (Triacetone Triperoxide) or <b>HMTD</b> (Hexamethylene Triperoxide Diamine).			
	If <b>no</b> orange or yellow color develops, the above substances are <b>not</b> present.			
				

Storage & Disposal	The tubes contain enough liquid for multiple tests. Replace cap after use for storage and further use. When finished, the tubes can be discarded in the trash.
