Speaker: Brian Denmeade

Field Application Engineer | CBC America

"I have a passion for helping secure the world through physically- and digitally-secure devices."

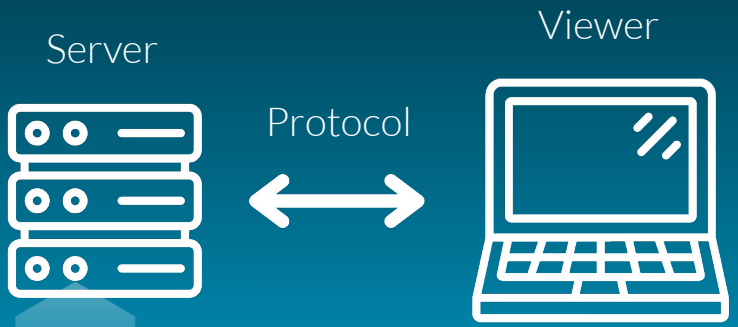
CONTENTS

1. What is VNC?
2. How it works
3. How it benefits businesses
4. Industry-use Cases
5. How Crosslink Advanced allows for remote desktop accessibility
6. Crosslink Advanced Demo
7. Crosslink Basic and how it turns a CORTROL channel into an interactive URL interface
8. The Benefits
9. Crosslink Basic Demo
10. Q & A

What is VNC?

- Virtual Network Computing (VNC) is a technology that allows remote access and control of a computer from another device, typically via a network connection. It is commonly used for remote administration, support, and remote access to workstations and servers.

How Crosslink Advanced Allows for Remote Desktop Accessibility



- Remote-access technology
- Client/server model
- Integration with VMS

How can VNC benefit my business?

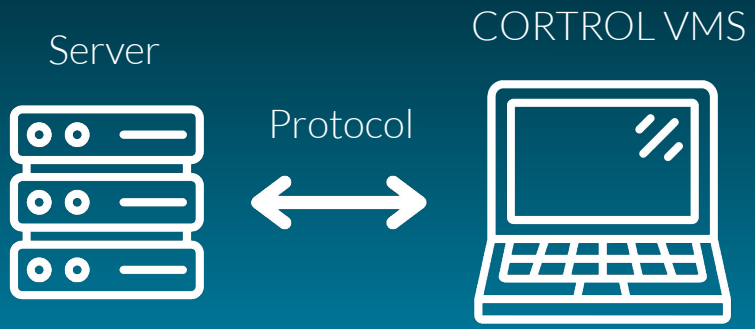
1. Increased productivity
2. Improved collaboration
3. Reduced system downtime
4. Improved security
5. Cost savings
6. Remote access to the system

Industry-Use Cases

1. Healthcare
2. Retail
3. Education
4. Manufacturing
5. IT
6. Finance

Demo [of Crosslink Advanced]

How does Crosslink Advanced work?



- Crosslink Advanced adds remote desktop viewing and control to CORTROL system
- Enables remote keyboard and mouse control
- Records and displays pages on video wall in the CORTROL Global edition.

Crosslink Basic & How it Works

- Crosslink Basic is based on the Chromium Embedded Framework (CEF) browser technologies to use URLs as a video source
- This URL as a source utilization allows for interactivity with web pages like Office365, URL based information dashboards, the web GUI of any edge device such as IP cameras, DVR's, access panels, and or IoT devices
- VMS as an interactive channel

The Benefits

- Unification
- Convenience
- Simplification
- Admin
- RVM market

Create a unified interface

Create digital signage

Remotely tweak devices

Demo [of Crosslink Basic]

Q & A
