

# Digital Transformation

Automated transformation of product data from any template to any other.

We enable seamless operations across business units that require data in their own standard formats.

The dataX Transformation Engine is the ideal solution for automated product data conversion when you are dealing with different ways of storing product data such as multiple units of measure that need to be normalized, or columns that need to be split or merged in order to meet the requirements of any proprietary format. Say goodbye to manual data handling and hello to a streamlined, efficient, and error-free data transformation process.

## Why choose us

### Time and Resource Savings

Automating the onboarding process reduces manual efforts, allowing your team to focus on strategic activities.

### Error Reduction

Automated data transformation minimizes human errors, leading to accurate and reliable data for use in downstream applications.

### Augmented Intelligence

Enjoy the power of automation combined with the ability to tweak and configure the mapping as required.

### Standardized Structure

Data in a standardized structure can easily be analyzed by other digital applications.

### Automated Data Conversion

AI-powered transformation automates the process of converting product data from input-specific formats to any required format, eliminating the need for tedious manual effort.

### Intelligent Data Ingesting

Our tool can ingest any input file, and figure out the target mapping from just a sample output file - no template needed. It will accurately and automatically map your data to that output.

### Configurable Mapping

Tailor data mapping rules to match the specific requirements of your target outputs, availing the benefits of flexibility within an automated process, while ensuring accuracy and data consistency.

### Self-Learning Model

With every manual intervention, the Transformation Engine learns and adapts, and this enables it to align its performance in tune with your business requirements - exactly like an intelligent assistant!
