

## Remote Real-Time Completions Monitoring & Data Management

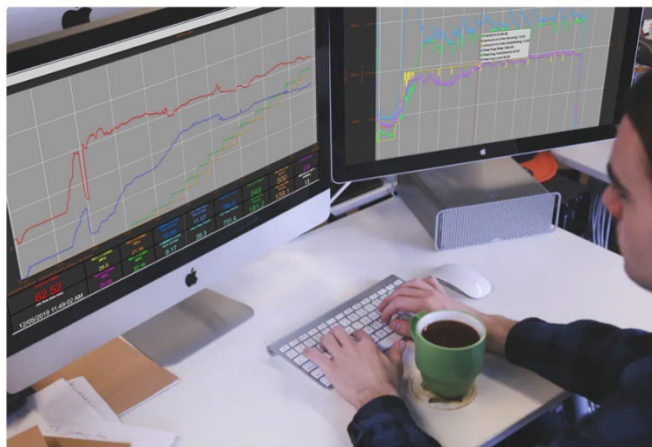

STEP offers a fully interactive web-based, real-time viewing platform to monitor hydraulic fracturing stimulations.

Powered by MRL Integrated Solutions Ltd., Fieldview is available to all clients and STEP professionals to observe live operations and evaluate previous stimulations using the overlay feature. We understand that key stakeholders need to monitor and manipulate treatment design remotely using data in a cost-effective and secure manner.

This customizable platform was designed to support our clients and ensure they get reliable, real-time data whether they are on or off site. We know that the sooner decisions can be made, the bigger the cost savings.

### Highlights:

- Remote monitoring for faster access to job data
- User and mobile friendly site
- CSV and PDF downloads of raw data available during and post treatment for all STEP fracturing operations
- Fully customizable display
- Real-time diesel and dual-fuel consumption and substitution metrics
- API connections available upon request
- Create templates that can be saved for future use
- Interactive chat with a direct line to STEP's engineering professionals
- Projectview – compare all intervals on one chart in real-time

### Overlay Features:

- Allows users to compare treatments by superimposing plots and graphically shifting to align as desired
- Evaluate breakdowns, pressure trends, instantaneous shut-in pressures (ISIP's) and stage lengths using any previous interval or well
- Fully customizable to suit your needs, including templates, color preferences and channels to transmit display
- Compare rates more effectively
- Make real-time decisions during challenging fracs

### To Access Fieldview:

- Go directly to <https://fieldview.step-es.com/login.php>
- OR go to [www.stepenergyservices.com](http://www.stepenergyservices.com) where you will find the "Fieldview Login" under "Client Links" at the bottom of our homepage
