

Migrating to Datadog from Dynatrace

Migrate confidently & quickly with RapDev

RapDev is the leader in ensuring complex tool migrations to Datadog are on-time, on-spec, and on-budget.

High complexity does not have to mean high risk

Efficient & Intelligent

Data-driven approach to dashboard prioritization for seamless cutovers

De-risk & Accelerate

Industry-leading expertise in migrating complex, mission critical services

Increase your ROI

Optimize your logging strategy and workflow while reducing costs

Case Study | Private equity leader reduces MTTR & cuts costs with Datadog

	BEFORE 	 AFTER
Time Sensitive Tool Migration	Impending contract renewal	Successfully migrated 1k+ hosts & 200+ apps in <4 months
Ineffective Alerting Strategy	1000s of alerts causing noise; ineffective means of remediation	30% reduction in alerts , enabling accelerated remediation
Lacking Synthetic Insights	Inadequate coverage & blind spots	Migration & updating of 900+ synthetics , enabling valuable insights into performance

PHASE 1 | Discovery

- Can we migrate in time before our upcoming renewal?
- How do we ensure no gaps in visibility during the migration?
- How do we know or decide what should be migrated? What should be given priority?

PHASE 2 | Implementation & knowledge transfer

- How do we drive a shift in culture so we make the most of observability?
- How do we implement with best practices while maintaining the views we already have in place?
- Do we have the right team for the work? Do they have the bandwidth?
