

# Depalletization

## Intelligent Case Picking

---

Dexterity's Depalletization solution autonomously deconstructs multi-SKU or single-SKU pallets. The solution uses vision sensors and machine learning algorithms to identify individual cases in any orientation, damaged condition, or lighting. Cases are gently picked in a way that does not destabilize the pallet. It can depalletize up to four pallets concurrently and places outbound cases on conveyance systems, chutes, other pallets, and more.

### No Training Required

Dexterity's software platform can depalletize on day 1 without needing training on millions of picks prior to deployment.

### Integration Agnostic

System can be installed and commissioned within 2 days thanks to Dexterity's modular hardware and configurable software.

### Rapid Pick Rate

Industry-leading pick rate with superhuman speed.

### Top-tier Support

24/7 support, guaranteeing operational continuity for your business.

## Key Performance Metrics

### 2.2 meter

tall pallets

### 1000's of SKU's

corrugate, shrink wrap

### Multiple pallets

deconstructed simultaneously

### 2-day installation

modular design

### 24/7 support

white-glove production support
