Migrating to Datadog from Dynatrace

Migrate confidently & quickly with RapDev
RapDev is the leader in ensuring complex tool migrations to Datadog are on-time, on-spec, and on-budget.

High complexity does not have to mean high risk

Efficient & Intelligent
Data-driven approach to dashboard prioritization for seamless cutovers

De-risk & Accelerate
Industry-leading expertise in migrating complex, mission critical services

Increase your ROI
Optimize your logging strategy and workflow while reducing costs

Case Study | Private equity leader reduces MTTR & cuts costs with Datadog

	BEFORE (dynatrace)	AFTER
Time Sensitive Tool Migration	Impending contract renewal	Successfully migrated 1k+ hosts & 200+ apps in <4 months
Ineffective Alerting Strategy	1000s of alerts causing noise; ineffective means of remediation	30% reduction in alerts, enabling accelerated remediation
Lacking Synthetic Insights	Inadequate coverage & blind spots	Migration & updating of 900+ synthetics, enabling valuable insights into performance

PHASE 1 | Discovery

Can we migrate in time before our upcoming renewal?

How do we ensure no gaps in visibility during the migration?

How do we know or decide what should be migrated? What should be given priority?

PHASE 2 | Implementation & knowledge transfer

How do we drive a shift in culture so we make the most of observability?

How do we implement with best practices while maintaining the views we already have in place?

Do we have the right team for the work? Do they have the bandwidth?

Ready to get started?
