

# Migrating to Datadog from New Relic

Migrate confidently & quickly with RapDev

RapDev is the leader in ensuring complex tool migrations to Datadog are on-time, on-spec, and on-budget.

## High complexity does not have to mean high risk

### Efficient & Intelligent

Data-driven approach to dashboard prioritization for seamless cutovers

### De-risk & Accelerate

Industry-leading expertise in migrating complex, mission critical services

### Increase your ROI

Optimize your logging strategy and workflow while reducing costs

## Case Study | The Climate Corporation enriched visibility & reduced costs with Datadog

	BEFORE 	 AFTER
Mission Critical Visibility	Complex array of services & inconsistent monitoring	Immediate <b>20% uplift</b> to observability ROI by migrating 300+ monitored services
Lagging MTTR	Disconnected data & inefficient remediation	<b>30% reduction in MTTR</b> , enabling identification of incident owners & accelerated remediation
Fragmented Data	Siloed observability & limited accountability	<b>Single observability framework</b> , enabling holistic strategy & clear ownership

### PHASE 1 | Discovery

Can we migrate in time before our upcoming renewal?

How do we ensure no gaps in visibility during the migration?

How do we know or decide what should be migrated?  
What should be given priority?

### PHASE 2 | Implementation & knowledge transfer

How do we drive a shift in culture so we make the most of observability?

How do we implement with best practices while maintaining the views we already have in place?

Do we have the right team for the work? Do they have the bandwidth?
