Migrating to Datadog from Splunk

Migrate confidently & quickly with RapDev
RapDev helps ensure complex tool migrations to Datadog are on-time, on-spec, and on-budget.

High complexity does not have to mean high risk

Efficient & Intelligent
Data-driven approach to dashboard prioritization for seamless cutovers

De-risk & Accelerate
Industry-leading expertise in migrating complex, mission critical services

Increase your ROI
Optimize your logging strategy and workflow while reducing costs

Case Study | Global auto manufacturer enriches visibility & reduces cost with Datadog

	BEFORE splunk>	AFTER
Mission Critical Visibility	90 days of data in Splunk	15 months of data
Time Sensitive Dashboards	Minutes for queries to populate	Loaded in seconds
Adoption and Users	Deep XML expertise required to build and manage dashboards	50+ teams building custom monitors

PHASE 1 | Discovery

Can we migrate in time before our upcoming renewal?

How do we ensure no gaps in visibility during the migration?

How do we know or decide what should be migrated? What should be given priority?

PHASE 2 | Implementation & knowledge transfer

How do we drive a shift in culture so we make the most of observability?

How do we implement with best practices while maintaining the views we already have in place?

Do we have the right team for the work? Do they have the bandwidth?
