SecOps Vulnerability Response

Identify, prioritize, and proactively respond to software vulnerabilities

Centralize your tools and leverage custom integrations to achieve unified vulnerability analysis, enhance threat response, and strengthen your security posture.

Gain deeper threat insights and fortify your security approach

RapDev's custom implementations of ServiceNow's SecOps VR centralize tools and streamline end-to-end workflows, directly addressing MTTR inefficiencies in vulnerability response management.

Success Story

Enabled Resilience to proactively address vulnerabilities, prioritize risks, and improve security frameworks

75%
faster module deployment

64%
improved MTTR vulnerabilities

[RESILIENCE®

Customized control with modern vulnerability response workflows

Core VR Deployment

Automated vulnerability risk calculations

Configured SLAs for remediation targets

Automated VR Response

Rule-based ticket auto-assignment

Customizable workflows for team alignment

Custom VR Integrations

Connect with tools: Prisma, Qualys, Tenable

Efficient data mapping from security tools to ServiceNow

Patching Automation

Ansible Tower and SCCM integrations

Custom pre/post-patch scripts ensuring server readiness
