CSDM as Code

Manage your CMDB from YAML files in your code repos

Ditch time-consuming manual service mapping and switch to CSDM as Code for automated, real-time, and self-service tag-based mapping.

Dynamically register, update, and manage the CMDB and service maps within a centralized framework, without logging into ServiceNow's UI

Optimized Deployments	Faster DevOps, ITOM Visibility, and ITOM Health deployments Zero CMDB admin overhead post-configuration
CSDM Compliant	Reliable tag-based service mapping CSDM 4.0 compliance, tailored to your maturity level
Streamlined Metadata	Seamless metadata bundling with OOTB templates Dynamic service map generation
Improved Visibility	Ensured governance, risk and compliance Centralized oversight on application architectures

Success Story
