# EIFys PD5s Photodetector Datasheet

### 1. Product Description and Key Features

ElFys PD series photodiode products consist of ElFys patented Black Silicon Induced Junction Technology. Product patent information can be found at <a href="https://www.elfys.fi/index.php/technology/patent/">https://www.elfys.fi/index.php/technology/patent/</a>. ElFys PD series photodiode products provide superior performance in photosensitivity across wide spectrum of wavelengths, from deep UV, Vis to NIR. ElFys PD series photodiode products are suitable for various high precision photometry applications.

#### Key features:

- Enhanced photosensitivity to UV, Vis and NIR
- H model provides low capacitance
- M model provides low dark current
- G presents the Guard ring design which offers capability of working under high reverse bias voltage with low dark current.

Part number	Photosensi- tive area (mm)	Chip Outline Dimension (mm)	Reverse Voltage (V) Max.	Guard ring connection	Packaging Options	Window / Fil- ter Options
PD5sHG	2.4 x 2.4	3.7 × 3.7	100	Yes	Chip / PCB	No window
PD5sMG	2.4 X 2.4	3.7 X 3.7	100	165	CIIIP / PCB	NO WITHOW

Note: The environmental protection of the photodetector depends on the selected packaging option. ElFys provides customized packaging solutions based on customer specifications.

## 2. Electrical and Optical Performance

Part num- ber	Spectral response range	Peak response wave- length, λ <sub>P</sub>	Photosensitivity			:у	Dark current @	Capacitance @	Shunt re- sistance	Noise equivalent
			λ <sub>p</sub> Typ.	200 nm Typ.	630 nm Typ.	930 nm Typ.	V <sub>R</sub> =10mV, Max.	V <sub>R</sub> =0V, f=100kHz, Typ.	@ V <sub>R</sub> =10mV, Min.	power NEP @ λ <sub>p</sub> , Max.
	nm	nm	A/W	A/W	A/W	A/W	pA	pF	МΩ	W/√Hz
PD5sHG	170-1100	1040	0.81	<b>⊣</b> 0.20	0.50	0.73	400	30	16	4.1×10 <sup>-14</sup>
PD5sMG		1010	0.80			0.74	15	105	660	6.5×10 <sup>-15</sup>

Note: All data are specified at typical ambient temperature (25°C) and under normal working conditions. Photosensitivity performance will be affected by the optical properties of the window and filter applied in the packaging or end application. Photodiode characteristics, including photosensitivity may degrade when exposed to UV below 240nm. Potential degradation depends on total exposure dose and ambient conditions.

### 3. Spectral Response (Typical)

Note: the temperature coefficient in the range 200-400 nm can be provided upon customer request.

## 4. Dark Current and Capacitance vs Reverse Bias (Typical)

## 5. Angular responsivity

Note: Angle-dependent photosensitivity is measured from a process control monitor photodiode without window or filter.

## 6. Packaging options

#### **PCB**

The photodetector is available by default on a demonstration board (30mm x 20mm). Customized demonstration board is available upon request according to customer specifications.

The electrical connections are anode (AN), cathode (CAT) and guard ring (GR). The default demonstration board is suitable for Surface Mount, Through Hole Mount, and Soldering Wire.
