I look back on my time working with the Allari JD Edwards team very fondly. I never would have survived my transition into an IT leadership role at Geneva without you all. I am greatly thankful for being able to be a part of your journey and the part that Allari played in mine. **STEVE BOLIN, DIRECTOR OF OPERATIONS, PAYMASTERS**

Trust Allari, your partner in JDE sunsetting success and embrace the future with full confidence.

A real-Life Success Story with Allari's JDE Sunsetting Services

CHALLENGE

Oracle's ERP strategy centers around SaaS solutions through Oracle Cloud Fusion ERP or Netsuite, with JD Edwards 9.2 remaining as an on-premise solution. Enterprises opting for a cloud solution face the dilemma of migrating to SaaS and sunsetting their JDE system. This entails navigating a complex journey of implementing a new ERP system, a process that might span years. Internal IT teams find themselves juggling the management of the critical JDE production system, the backbone of business operations, while simultaneously grappling with learning and implementing the new SaaS solution. **This predicament forces a tough decision where no outcome seems favorable: focus on production support, delay implementation, or risk impacting ongoing business operations while concentrating on the new ERP.**

SOLUTION

Enter Allari – your JDE operational and production support partner. While companies typically focus on selecting an ERP implementation partner, the vital requirement for ongoing support often goes unnoticed. Investing in an experienced JDE partner bridges the gap between successful implementation and sustained operational efficiency. Allari addresses this by offering dedicated and on-demand staff with comprehensive JDE expertise. **With a global network of JDE experts, Allari facilitates seamless transitions for customers' internal support teams to the new ERP solution, ensuring expertise and operational continuity converge seamlessly.**

RESULTS

In a notable achievement, **Allari successfully supported a \$4 billion, 3,000-user manufacturing company with a team of 20 JDE experts and an on-demand team of over 10.** From initial discussions to 90% team staffing within three months, they quickly reached a steady state. This enabled the equivalent number of the customer's internal team to focus on a staggered global SAP migration projected to span five years. Throughout this pivotal period, sustaining historical growth became paramount, underscoring the critical role of the production support team. **The seamless collaboration ensured no disruptions or stalling in business operations, providing a foundation for continuous growth.**
