

GREEN MACHINE

Sump Cleaner / Filter Unit

The EdjeTech GREEN MACHINE was developed to help eliminate the headaches the metalworking industry is having with their industrial fluid waste streams.

HEADACHES YOU MIGHT BE EXPERIENCING

- ☐ Maybe your experiencing cumbersome and slow machine reservoir pump outs
- Or dirt and sludge on the bottom of the make shift holding container
- Possibly you are charged with running a lean facility that needs to run leaner and faster
- ☐ Maybe you want to reduce costly labor time during machine cleaning
- Or reduce machine down time during cleaning
- Possibly increase production by maintaining clean machines
- ☐ Maybe reduce spilling and hazardous wet floors while transporting fluids
- □ Or you have a lot of maintenance turn over and you are tired of spending a lot of time training and retraining personnel on difficult equipment
- Possibly you may need a unit to fit down those narrow aisles between machines

Any sound familiar? Ease your pain and eliminate that throbbing headache.

The GREEN MACHINE is a low cost, compact system that uses 19 cfm of air, filters the fluid (200 micron), easily transports and discharges contaminated fluid to a recycling station or waste fluid holding container.

Everything that is needed to remove contaminated fluid from a machine sump or washer reservoir is included in the GREEN MACHINE. Each system is a complete turnkey system, designed for easy start up and use.

The GREEN MACHINE is available in 55 gallon and 90 gallon capacities.

The GREEN MACHINE DTS is a dual tank system with an extra tank that holds clean fluid for quickly recharging the machine reservoir.

SYSTEM SPECIFICATIONS

Air Venturi Suction/Discharge Feature

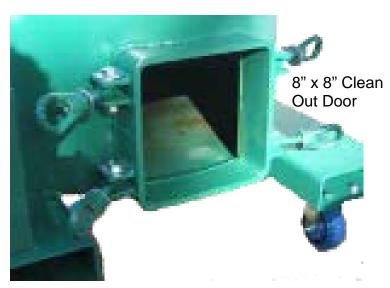

Capacities

- 55 Gallon
- 90 Gallon

Forklift Guides
Heavy Duty Casters
Compact
Heavy gage steel construction
200µ Bag Filter
Made to fit in narrow spaces
Pumping rates 55-70 GPM
Air Operated

Tool Holder

1 cu.ft. basket
