

Be in the know!

Marijuana may cause drug interactions with your medications

Chemicals found in marijuana such as THC and CBD may interact with medications, with potential serious side effects.

Common drugs that have interactions include:

- Sedatives
- Anti-Anxiety medications
- Anti-Depressant medications
- Pain medications
- Seizure medications
- Blood Thinners

It is always recommended to inform your Doctor or health care provider of any substances you may be taking to avoid harmful drug interactions.

- **542 known drugs may interact negatively with CBD (cannabidiol)**
- **380 known drugs that may interact negatively with THC (tetrahydrocannabinol), the main chemical in marijuana**

You can use websites such as Drugs.com to find a detailed list of prescription medications that may interact with marijuana.
