**Luxury
Vinyl
Statement.**

Considering the past, we imagine a bolder future, visiting places of wonder in order to create a range that broadens perspectives and challenges world views.

Luxury Vinyl: Strut

01. What is Vinyl?

As a product type, vinyl is the fastest growing flooring category in the world.

Boasting the natural good looks of wood, marble, concrete, terrazzo and ceramics with the technical superiority of vinyl, this enhanced floorscape is unrivalled in its durability, value and performance.

Mimicking traditional floors at a fraction of the cost and with less maintenance required, vinyl is available in a range of options, allowing homeowners the freedom to create their own authentic looking décor schemes.

02.

Benefits of Vinyl

Less expensive, softer, quieter, and more resilient than traditional hard flooring.

Cost Effective: Vinyl is the more economical option than traditional wood or engineered floors.

Long Lasting: While properly maintained, your floors will last you a lifetime.

Endless Options: With so many options to choose from, vinyl offers something for everyone.

Natural Good Looks: Innovation in the category through advanced technology makes realistic finishes possible.

Simple to Install: Fast and simple and can be used immediately after installation. Trust our certified installers to lay your floor the way you want it. Easy application makes popular chevron and herringbone parquet styles possible.

Waterproof: Exposed to splashes and spills, vinyl overcomes the handicap of parquet and laminates, and is the ideal flooring option for areas exposed to water like bathrooms and kitchens.

Soft and Silent: Vinyl emits little to no noise compared to ceramics and other hard floors and is softer, too.

Easy to Clean: As simple as ceramics – just sweep or vacuum. See our care section for more details.

Hard Wearing: A protective wear layer stands up to dents, scratches and stains, while a fibreglass provides added stability. This serves to protect the integrity of the product in heavy traffic environments.

Manufacturers have mastered the art of imitation. With stunning graphics and detailed embossing there are now vinyl products nearly identical to the premium materials they mimic.

03.

Vinyl Growth & Trends

Traditional hard flooring is bulky, costly, and difficult to maintain. Laminates mimic these materials in looks, but can't meet their performance. Vinyl offers the realistic looks of wood, stone, terrazzo or marble, at a fraction of the cost, and with practical benefits that include superior wear, especially in wet areas, along with endless design possibilities.

The product's ease of maintenance makes it especially resilient in commercial areas and homes with children and pets. It's also warmer underfoot and softer than traditional materials. These factors have made vinyl the go-to option and the fastest growing choice in flooring today.

The success of vinyl has come from the expense of natural/exotic engineered wood options, which are bulky and extremely costly. From there the market

moved onto laminates, which allowed for a wood-look at a fraction of the cost, however, these didn't perform well in wet areas due to not being waterproof and made an unnatural sound when walked on.

Manufacturers have mastered the art of imitation. With stunning graphics and detailed embossing there are now vinyl products nearly identical to the premium materials they mimic. Belgotex vinyl, available in numerous designs and colour variations, ensure that no matter your style, there's a vinyl option for you.

With traditional neutrals and so many colours to choose from, as well as how our vinyl and carpet ranges work beautifully to compliment each other, which gives you the ability to mix-and-match hard and soft flooring to cater for all your needs.

Luxury Vinyl: Portland

04. Why Choose Belgotex Vinyl?

Belgotex vinyl is sustainably sourced – we make sure our suppliers share our values.

- We offer a local guarantee on all our products.
- The Belgotex vinyl offering is the widest range available and is stocked locally.
- We offer a broad selection of colour and design options.
- The ranges we source are of high-quality and cater for both the residential and commercial markets.
- We also ensure that our ranges can withstand our harsh climate.
- Belgotex offer clear installation guidelines for optimal installation, and product guarantee.

05. Types of Vinyl.

Vinyl Sheeting/ LVT on a Roll.

Luxury Vinyl: Amble

Although commonly known as “lino” or “linoleum” out of habit, this floor covering has grown in leaps and bounds, and the construction is now referred to as “vinyl sheeting” or “LVT on a roll”.

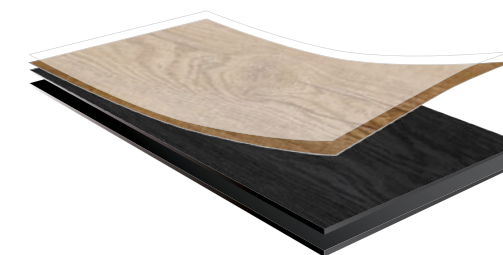

Vinyl is a synthetic man-made type of plastic. It is made from ethylene (found in crude oil) and chlorine (found in regular salt). When processed, these substances are combined to form Polyvinyl Chloride (PVC) resin, commonly referred to as vinyl. This product is widely used throughout the construction, medial and vehicle industries.

It also now comes in Compact and Blacktex backings.

Stick-Down LVT

Luxury Vinyl Tiles (LVT)'s are made up of multiple layers starting with a base of PVC topped with a fill layer for thickness and dimensional stability.

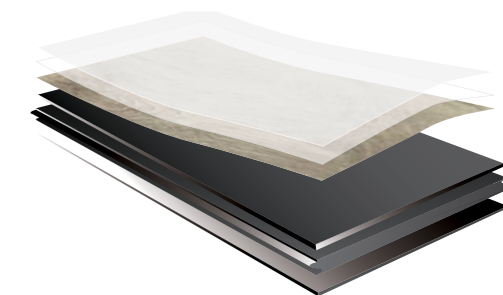

The stick down ranges are our most popular. Easy to install and maintain, and available in a wide variety of colours and sizes. It can be further personalised using different laying styles and colour combinations.

Rigid Board LVT

Rigid board vinyl flooring is a vinyl tile that has an enhanced rigid core construction for dimensional stability. A rigid board vinyl is a solid plank that has less pliability, giving it a sturdy feel underfoot.

Our rigid board is a glue-less option that allows for installation over ceramic tiles. It is also a good option for those who many want something a little less permanent.

Vinyl Composite Tile

A Vinyl composite tile is a homogeneous, semi-flexible tile. It is a hard-wearing and stable vinyl tile, ideal for institutions, and is easy to install.

Luxury Vinyl: Terrazzi

06. Residential vs Commercial Vinyl

Both our residential and commercial products are made from high-quality materials and are guaranteed to meet your needs.

The difference is in the wear layer, where a commercial product is thicker in order to offer more protection for large amounts of continuous traffic. While you could install commercial flooring in your home, you would be paying a premium for a product designed for a mall, which far exceeds the requirements for home use.

07.

Product Portfolio: LVT

Bayport.

This luxury vinyl plank range draws its inspiration from the refined elegance of natural wood and is designed for heavy residential use. Mimicking the tranquility of nature, these vinyl planks create an ambient environment and guarantee ease of maintenance for modern living.

Quantity of Tiles Per Box:	50

Note: Gambit is also available in 2.5mm total thickness for the following colours: Brute Force, Hard Lead, Ox Brawn, Solid Steel.

10.

Caring for Your Vinyl

By following the correct cleaning recommendations, preventative maintenance advice and further cautions, you can help your vinyl floors last a lifetime.

- When cleaning your vinyl use a soft bristle broom or vacuum cleaner to remove any loose dirt.
- Damp-mop as needed with clean water and a non-abrasive floor cleaner (harsh cleaning chemicals should not be used on vinyl).
- Treat spills, spots, or stains immediately with a non-abrasive floor cleaner. Remove any residue or moisture after cleaning.
- No wax or polish required.
- Please refer to our full maintenance document for further information on preventative maintenance and further precautions*.

*This information can be found on our website under 'Caring for Your Vinyl'.

11. FAQ's

How long does vinyl flooring last?

Vinyl flooring is extremely durable, carrying a residential warranty of 10 to 20 years, while the commercial product can last between 7 and 15 years in a heavy commercial setting.

Does thickness matter?

The wear layer matters when considering where the product needs to be installed. Commercial applications require a thicker wear layer, while a thinner wear layer does not result in an inferior product, it simply means that the product has been designed for low traffic residential areas.

Is LVT and vinyl sheeting better than laminate?

Laminates aren't 100% waterproof, and so even spills can result in the chipboard under the product swelling and popping up. Because it's waterproof, LVT and vinyl sheeting offer the perfect option for your bathroom, kitchen and the rest of your home.

How well does it wear?

Provided the correct product has been properly installed and regular maintenance is adhered to, you can expect your vinyl floors to last you a lifetime.
