Honkai star rail beginners guide

Honkai: Star Rail offers an engaging experience with its mission-based gameplay, exploration, and unique turn-based combat mechanics. New players are advised to check the Beginner Guide for essential tips and strategies. Upon starting the game, players assume control of Kafka, a Stellaron Hunter, during the tutorial. It is recommended to take time to familiarize oneself with the game's mechanics and controls. For those struggling with Honkai: Star Rail's mechanics, the Strategic Training program can be accessed in the Interastral Peace Guide menu, providing valuable insights and rewards such as Player EXP, upgrade materials, and Stellar Jades. The primary sources of Trailblaze EXP are Story and Side Missions, which unlock more content as levels increase. Exploring every nook and cranny of available maps is crucial for discovering Treasure Chests that reward important items. Be cautious of formidable foes, as they grant greater rewards. Once progressing enough in Trailblaze Missions, players can join in-game events, which offer additional items, cosmetics, and Stellar Jades. The Daily Training mission provides daily rewards such as Trailblaze EXP, Stellar Jades, Credits, and other materials for leveling up characters. Each mission grants points depending on difficulty, with a goal of earning 500 Points every day to unlock all daily rewards. Prioritizing Character Ascension and Traces is essential for leveling up characters, providing direct stat increases and improved skills. Light Cones can be considered as weapons for characters and are important for leveling up. They grant bonus stats and passives if the character's Path matches the Light Cone's. Relics and Ornaments are equipable items that provide stats and useful effects to characters. Claiming these rewards often requires defeating enemies, with costs varying depending on the reward. Golden Calyxes offer EXP and refinement materials for leveling up characters and Light Cones, while Crimson Calyxes reward Trace materials for enhancing character skills and passive abilities. Stagnant Shadows provide materials necessary for Character Ascension, costing 30 Trailblaze Power per run. Echoes of War offer more rewards like Light Cones, Relics, and Advanced Trace Materials, but with a limited number of runs per week. The game will enter its next Server Reset period, providing another opportunity to claim rewards and progress your journey. It is essential to visit the Embers Exchange tab in the store, where you can trade Undying Embers for valuable resources that will aid in saving Trailblaze Power. Additionally, explore Best Uses for Undying Embers and How to Get Assignments to acquire Character, EXP, Synthesis Materials, and Credits. To optimize your assignments, choose the recommended characters, as they offer better rewards. It is also crucial to build a strong team early on by completing The Simulated Universe Guide and Forgotten Hall Guide, even if it's an end-game mode. In combat, focus on utilizing elements to deplete the Toughness bar of enemies, making them more vulnerable to damage. Each character has a specific element, so building multiple characters with different elements will be beneficial. Skill Points are vital in combat, as they enable you to use Skills, which consume one point while Basic Attacks generate one. Learn how to manage your Skill Points effectively to balance your team's damage output and survivability. Utilize unique techniques before engaging in combat to gain a tactical advantage, especially against powerful opponents. When the Toughness bar is depleted, enemies become more susceptible to damage. To maximize your progress, keep an eye on Stellar Jades, which can be obtained through character banners or achievements. These milestones grant additional resources and may unlock Easter Eggs and pop culture references. Borrowing featured characters from friends allows you to add temporary elements to your team, making it easier to complete Calyxes and Echoes of War. Honkai: Star Rail's combat system allows for various abilities, including Base Attack, Skill, and Ultimate. The Ultimate ability charges the characters' Energy meter, which can be used at any time. Each character has an Element that determines their damage type and a Path that defines their role in combat. To build a successful team, players must choose characters with diverse Elements to exploit opponents' Weaknesses. A well-rounded team should include one Abundance or Preservation character for support, one or more Destruction, Hunt, or Erudition characters for dealing damage, and one or more Harmony or Nihility characters to boost allies or reduce enemies' power. New players can start with the provided starter team of four characters: Trailblazer, March 7th, Dan Heng, and Asta. These characters meet the requirements for a balanced team. To unlock additional characters, players must use the Warp system. It's essential to equip Light Cones and Relics on each character. Upgrading equipment is crucial in Honkai: Star Rail. Players can enhance their gear by leveling up and ascending their characters. The most important upgrade materials include Stellar Jade for Warps, Trailblaze EXP for leveling up, and Character Exp Materials for increasing character level. The game offers various gameplay activities, such as Missions that provide quests, including Trailblaze Missions, Adventure Missions, Companion Missions, and Daily Missions. Trailblaze Power regenerates over time, and you can enter a combat challenge in exchange. Successful runs reward Trailblaze EXP, Character EXP, Light Cone Exp, and Credits. The Simulated Universe is a combat challenge with various stages, open to new players and regularly refreshed. Forgotten Hall is another combat challenge that offers great rewards but only unlocks at Trailblaze Level 23. Time-Limited Events offer additional gameplay for a few days or weeks, while Assignments provide passive upgrade materials. As a new player, prioritize Trailblaze Missions and main quests, which unlock the Simulated Universe and Forgotten Hall. Daily Missions award 200 Activity Points, useful for Trailblaze Experience, Stellar Jade, and Credits. The Honkai: Star Rail Story Walkthrough is a beginner's guide that covers essential information, tips, and tricks. Honkai: Star Rail is a free-to-play game from HoYoverse, available on PC, mobile, and PS5. It features turn-based combat with auto-battle and fast-forward options. The gameplay resembles Genshin Impact more than Honkai Impact 3rd, involving traveling to locations to battle enemies for gear and resources. To start playing, focus on the story Trailblaze Mission until you complete 'Long Wait for the Blade's Edge' and unlock Daily Training. This allows you to access additional content, including the Simulated Universe and Forgotten Hall. Daily Activities in Honkai Star Rail: A Guide to Rewards and Updates Complete daily activities for Stellar Jade rewards. These activities include Daily Training Assignments, Trailblaze Power Battle Pass challenges, logging into HoYoLAB for free rewards, and spending Trailblaze Power. Daily Training Assignments spend Trailblaze Power battle pass challenges log in to HoYoLAB for free rewards The rest of these daily activities reset at 4am server time every day. Getting characters in Honkai Star Rail involves utilizing Star Passes to Warp on Banners within a gacha system. Although real money can be spent to acquire Stellar Jade for regular and Special Passes, the game offers multiple ways to obtain free Stellar Jade simply by playing. This menu allows players to spend their Passes to Warp on Banners. To unlock Banners and the ability to Warp on them in Honkai Star Rail, completing the 'A Moment of Peace' part of the 'Today Is Yesterday's Tomorrow' Trailblaze Mission Prologue on Herta Space Station is necessary. Limited-time events occasionally provide 4-Star characters for free, while saving up to buy 4-Star characters from the in-game shop using Undying Starlight currency is also possible - however, this currency can only be obtained by Warping on Banners. Banners may initially seem complex and overwhelming, but our three main tips are: Spend regular Star Passes on the Beginner's Banner first. Always convert Stellar Jade to Special Star Passes in the shop, rather than regular Passes. Prepare for the 50/50 by saving enough Stellar Jade for two guaranteed 5-Star pulls to obtain desired characters. The only positive aspect of this complicated system is that players are 100% guaranteed to get the featured 5-Star character the second time they pull a 5-Star character or Light Cone on the same Banner. To level up characters in Honkai Star Rail, there are two methods, but using Character EXP materials called Travel Encounters, Adventure Log, and Traveler's Guide is highly recommended. These EXP materials can be obtained through limited-time events, gameplay, and activities like quests and treasure chests. You hit 'Level Up' in Honkai Star Rail when your character gains enough EXP and reaches certain milestones. Leveling up incurs a cost of 1 Credit per 10 EXP earned, but there's a twist - every 10 levels past level 20, you'll need to Ascend your character before continuing to level them up. This process requires specific materials, which can be obtained from various sources such as defeating enemies in the wild, completing Assignments, or finding special items in Stagnant Shadows. The leveling cap is level 80 for each character, but maxing out all characters isn't necessary for team effectiveness. It's crucial to manage your resources wisely and only upgrade when necessary. To further enhance your characters' abilities, focus on improving their Traces, which can be upgraded using materials obtained from enemies, bosses, or other sources. Traces not only boost basic skills but also unlock special abilities and stat upgrades. However, upgrading every Trace to its maximum isn't essential, especially for less frequently used attacks. Prioritize upgrading the most critical abilities based on your characters' roles in the team. Relics are equipable items that increase stats, including bonus effects when worn as 2-piece or 4-piece sets. While there's no limit to equipping specific Relics, paying attention to set bonuses is key, especially at the start of the game. Focus on building 2-piece or 4-piece sets and worry less about main and substats initially. Relic and Planar Ornament farming are essential for better equipment as you progress through the game. These items can be farmed in various ways, including searching chests, buying them from shops, completing quests, or participating in Realm of the Strange event periods, which offer double drops. During Planar Fissure periods, you'll receive double drops for farming Planar Ornaments. Take advantage of these special times when possible! Additionally, use Self-Modeling Resins to create custom Relics, but be cautious not to waste them as they're rare. As a reminder, you can only choose your main stat with this method. Stellar Jade is the rarest currency in Honkai Star Rail, essential for exchanging Warps (Star Rail Passes) and acquiring characters through the gacha system. You can use it to buy Fuel, but we recommend reserving Stellar Jade for buying Star Passes for a mostly free-to-play experience. Almost every activity rewards Stellar Jade, along with login events that offer Stellar Jade or Passes each patch. However, accumulating enough Stellar Jade takes time. Some unique ways to acquire Stellar Jade include participating in Limited-time events, Conventional Memoir Events, Daily Training, and redeeming codes. You can also earn it by defeating Warp Trotters, texting characters back, talking to Astral Express passengers, or purchasing items from World Shops with its special currency. For a detailed explanation on how to get Stellar Jade, check out our dedicated page. The Battle Pass (Nameless Honor) is an optional feature that rewards you for completing daily, weekly, and event tasks. It's unlocked after completing the seventh part of the Chapter 1 Trailblaze Mission 'In the Withering Wintry Night'. The premium track offers exclusive profile pictures, instant boosts to Battle Pass levels, and slightly more Stellar Jade and Fuel. The free and premium tracks offer a range of items and materials, including Star Rail Passes, EXP materials for characters and Light Cones, Credits, Self-Modeling Resin, character and Light Cone Ascension materials, and a choice between five 4-Star Light Cones on the premium tier. The Battle Pass has 50 levels on both tracks, but you only need to reach Level 30 on the premium track to choose your Light Cone. In summary, the Battle Pass is not essential for playing Honkai Star Rail. It's an optional bonus for regular players, with every reward except for premium Light Cones and profile pictures also available through gameplay. Make sure to claim your free rewards before each Battle Pass period ends! Trailblaze Levels and Rewards in Honkai Star Rail The Trailblaze Level system unlocks higher levels of Calyxes, Stagnant Shadows, and Echoes of War at the Astral Express. While current levels stop at 70, events often require a lower level, usually between 20-30, to access higher content. However, you're locked out of certain missions until reaching the required Trailblaze Level. Rewarding yourself on Pom Pom with rewards every time you gain a Trailblaze Level is allowed only when your Equilibrium Level matches the requirements. When advancing to high enough levels, an Equilibrium Trial must be completed to test readiness for further progression. Completing these trials eventually becomes unavoidable due to level constraints. Trailblaze and Companion Missions form the main storyline quest structure in Honkai Star Rail. The Trailblaze Missions follow the Astral Express crew's journey to contain Stellarons, divided into Chapters with Prologues on Herta Space Station and Continuance missions between Chapters. Companion Missions delve deeper into characters' pasts, presents, or futures, requiring a mix of progressing with the story and reaching the right Trailblaze Level. Companion Missions contain story choices that are permanent once made, so choose wisely as you can't change decisions saved by the game. Events in Honkai Star Rail include time-limited quests and old reruns stored in Conventional Memoir. These events often require completing Trailblaze Mission objectives and have specific requirements based on location within the story. Trailblaze Power and Fuel in Honkai Star Rail Trailblaze Power is a currency used to claim rewards from various challenges in Honkai Star Rail. It replenishes every six minutes, with an additional 60 units available through the use of Fuel, which can be instantly replenished. There are two types of Trailblaze Power: regular and reserved. Regular power has a limited cap of 240, while reserved power allows for up to 2,400 units. Forgotten Hall and Memory of Chaos The Forgotten Hall is an optional combat challenge that offers rewards such as Stellar Jade, Light Cones, and unique characters. However, these rewards are not essential, and players can ignore the Forgotten Hall if they do not enjoy Star Rail's combat. The hall is unlocked after completing a specific side quest and accessed through a cracked standing mirror. The challenges in the Forgotten Hall vary depending on the type of path taken, with Memory being a permanent, fixed combat challenge that offers more rewards than Memory of Chaos. The Simulated Universe is another optional activity that allows you to get Planar Ornaments and has its own story, though it's not as hard as the Forgotten Hall. Here, you can clear 'Worlds' on lower difficulties to earn Planar Ornaments and buffs during gameplay. These buffs come in two forms: Blessings from killing enemies or participating in Events, and Curios from defeating Elite enemies and participating in Events. Cosmic Fragments are used to upgrade your Blessings and are sometimes given as an option with Curios and Blessings. In the Simulated Universe, your Blessings, Curios, and Cosmic Fragments don't carry over each new run, but you have a permanent Ability Tree where you can invest points to improve combat. The main appeal of the Simulated Universe is farming Planar Ornaments, and there are weekly rewards for playing through enough Worlds and earning points. These rewards include Regular Star Rail Passes Stellar Jade Credits Lost Gold Fragments Tracks of Destiny Immersifiers Herta Bonds. The higher your Equilibrium Level, the better these rewards. While Banners feature popular characters like Light Cone and permanent banners, event banners also offer these characters, making them obtainable through Special Star Passes and Warping on the event character banners. 5-Star characters may not be inherently better than 4-Stars; consider each team's unique situation. For instance, Bronya can be a valuable addition to your team as a Harmony character, but Tingyun could also be an excellent option if you need to boost DPS without sacrificing Skill Points. Events offer great rewards for minimal effort and can sometimes provide 4-Star characters, Light Cones, and Self-Modeling Resin. However, the best event rewards are usually obtained during their debut, but you can still earn rewards from later events. Spending currencies at World Shops is essential; while you may not need Credits now, spending unique area currencies like Hertareum, Shields, or Strales can reward you with Credits and other valuable items. You'll be able to purchase Credits when all other options are depleted. Targeting Warp Trotters first in battles rewards Stellar Jade but allows them to escape after a set number of turns. These creatures have vulnerabilities against Quantum, Imaginary, and Physical Damage. Avoid placing party members with high Taunt beside weak allies; instead, consider pairing them with characters who can withstand attacks or benefit from taking damage. Exploring the game world reveals random rewards and unique scenarios. Interact with everything, as seemingly innocuous objects might have surprising interactions or secrets. During regular battles, use your Ultimate during combat, but in Elite and Boss fights, carefully consider when to use it, potentially delaying energy generation for another Ultimate. Save your Ultimate for critical moments like after a boss's big attack or when healing is necessary. You don't need to unlock all of a character's Traces; if you're not using their normal attack, there's no point in wasting resources on leveling up the relevant Trace. What to Do Next in Honkai Star Rail The game's simulated universe and divergent universe modes offer entertaining gameplay with generous rewards. In the divergent universe mode, characters are already decently leveled up, allowing you to focus on other aspects of the game. Save your stellar jades for a character you enjoy playing with. Participate in limited events, which usually last two weeks and provide valuable rewards. Many of these events are beginner-friendly and don't require powerful characters. Explore maps to discover rewards hidden in chests and puzzles, making map exploration worthwhile. Maximize your trailblaze energy by using it for farming nodes, as this is a primary source of player EXP. Keep your trailblaze power topped up to avoid running out, as it recharges at a rate of one every six minutes and can be capped at 300. Each character has a specific role in the party, with different paths dictating their abilities. Characters can be strengthened through various means, including ascension levels, Eidolons, light cones, relics, and traces. Light cones are the primary equipment on characters, with each having a unique path that affects their special effects. A "signature" Light Cone refers to a unique synergy with your character, enhancing their abilities. Traces can also boost your character's strength by feeding them materials, allowing you to upgrade individual skill levels. Main Traces grant permanent effects, with each character starting with at least three of these special abilities. Relics come in two types: Cavern Relics and Planar Ornaments. You can equip up to four Cavern Relics, earning bonuses if they share a set or all four have the same set. Meanwhile, you can wear two Planar Ornaments, gaining rewards from combining relics. Each relic has a main stat and substats, randomly selected from a pool and accessible through farming nodes in the game.
