Remote Hazard indicator Safety Monitor

A Remote Hazard Indicator is required in areas served by an isolated power system. A green indicator light displays that there is no unsafe leakage. In the event of hazardous leakage current, the red indicator light will be illuminated and alarm. The Remote Hazard Indicator is robustly constructed and compact for a long life of service.

Features/Specifications:

- Automatic alarm triggering and deactivation without the need for manual resets
- Temporary mute button with yellow “silenced” light
- Replaceable indicator lamps without the need to remove the unit from the wall
- Available as a singular indicator (Part Number 358901) or a dual indicator with a digital display (Part Number 358900)
- For use with a Line Isolation Monitor (Part Number 028435)
