Patient Service Console Compact Wall Unit

The Patient Console provides typical hospital devices in an area that allows for maximum floor space availability. The fascia includes a high-pressure plastic laminate insert available in a variety of colors and patterns. Individual fixed barriers in the backbox shall be pre-installed by HSI at the factory to separate different voltages and mechanical services*.

*Patient Consoles are not pre-piped or wired, please contact HSI for additional information.

Features/Specifications:

- Backbox shall be a code gauge, formed aluminum trough with a combination of 1/2 inch and 3/4 inch knockouts on top and bottom of the backbox
- A pre-formed aluminum end cap shall be permanently attached to the backbox.
- An extruded anodized aluminum fascia panel shall be field attached to the backbox assembly by the installing contractor using screws provided by HSI
- Electrical conduit runs to the knockouts and wiring within the console shall be the responsibility of the electrical contractor
- Medical gas outlets shall be installed in the consoles by the mechanical contractor

Options:

- Made to order, for any configuration and size
