Petite size guide

For women under 5'4", shopping in petite clothing stores can be a game-changer. To choose the right brand, it's essential to understand how their size charts work. Since most brands follow standard petite size charts, each has its own unique tailoring style. To find your perfect fit, take precise measurements with the help of a tailor or a friend/family member at home. For accurate measurements, consult the provided Petite Sizing Guide on torso, sleeves, shoulder, and inseam length. When choosing items like petite pants, jeans, or jumpsuits, refer to the size chart for each brand you're interested in. Variations can range from 0.5 inches in sleeve length and waist to 2 inches in sleeve length. For example, Banana Republic might be a better fit if you have bigger hips, while Jcrew could suit those with shorter arms. However, note that inseam lengths are not always specified in petite size charts due to the diverse nature of pants styles, which can vary significantly depending on the cut and design. As a general guideline, look for inseams between 25-30 inches, which should provide a comfortable fit for most petite women. To better understand sizing options, consider popular retailers like ASOS, Banana Republic, and Jcrew. Each has its unique style and measurement system, so it's crucial to research and compare sizes carefully to find the perfect fit. A petite size chart is a document showing the petite size body measurement corresponding to the dress size of a particular brand or country. The question is why you need a petite size chart in the first place. Well as a petite you are always conscious of fittings. Normal dress sizes are for people with longer legs, torso, and inseam. A major problem every petite shopper faces while online shopping is returning the delivered dress due to the wrong sizes. The issue is so rampant that it's considered normal. Another issue is the refitting of the dresses bought. These two issues often cost you time and money. To avoid you need to understand the combination of your body and different petite sizes of brands and countries. The whole idea behind dressing a petite body type is elongating the body structure. Now through a petite size chart, you can easily get the exact size for your short torso or legs. To read the petite size chart, you need to have your body measurements first. If possible try getting someone else to measure your body. Whoever is doing the measurement should make sure that the measurement tape is not held too tightly or loosely. You need to take five measurements, out of which three are most common. The other two are most specific for top and bottom dresses. To measure your bust, raise your hands and wrap the tape across the fullest part of the bust. Make sure the tape doesn't slip from the back while taking the measurement. Waist is the trickiest part while measuring your size. We call it tricky because it defines your petite body type and it changes for normal body and bodies with medical conditions such as pregnancy. To find your waist in normal cases you need to place the measurement tape between the bottom of your ribs and the top of your hips. Make sure it's right above your belly button. Take measurements of both breathing in and out. For better fittings stay close to breathing out measurements. For pregnant petites, place the tape between the lower back and upper hip right through under your belly. To take the perfect hip measurement, stand and place your feet together. Your hip is right below your waist, find the widest point of it. Wrap the tape around it. Make sure it's neither too tight nor too loose. If there is any confusion don't shy away from measuring twice. Inseam is the length between your crotch and ankle. To measure it, stand straight, and put one end of the measurement tape right where your crotch ends. From the other end measure up to ankles. You can also measure your jeans or pants. Just measure the length between the crotch and hem. While measuring the body make sure you are standing barefoot. If your upper body is petite, you will want to measure your sleeves. A sleeve is the length measured from the centre of your neck to your shoulder and down to your wrist.
