The role of the chair, also known as chairman, chairwoman, or chairperson, is to preside over organized groups such as boards, committees, and assemblies. The person holding this office typically conducts meetings in an orderly fashion and ensures the group's business is carried out effectively. In some organizations, the chair may be referred to as president, while in others, these titles may refer to distinct positions. The term chairman can be used neutrally, without implying a specific gender. When someone chairs an event or meeting, it means they lead the proceedings. The role of a chairman is multifaceted and crucial for maintaining impartiality and ensuring an objective approach in various settings. This tradition originated in British music halls where the chairman was responsible for announcing performances and controlling rowdy audiences. In the 1960s and 1970s, TV shows like "The Good Old Days" popularized this role through Leonard Sachs' portrayal. In socialist states, executive figureheads were referred to as "Chairman of the X Committee," a term that gained significance in countries like Russia under Lenin and China under Mao Zedong. The chairman's duties include presiding over meetings, calling them to order, announcing agendas, and enforcing rules. At meetings, the chair should remain impartial and not interrupt speakers. In committees or small boards, the chair votes alongside members; in larger assemblies, they vote only when necessary. The chair has one vote unless specified otherwise by the organization's rules. The powers of the chairman vary widely across organizations, with some having executive authority to hire staff and make financial decisions, while others may be limited to making recommendations or serving as spokespersons. If a chairman exceeds their authority, engages in misconduct, or fails to perform duties, they may face disciplinary procedures including censure, suspension, or removal from office. The role of the chair in public corporations varies depending on the type of organization. Typically, whoever appoints or elects the chair has the power to discipline them. There are three common types of chairs: executive, non-executive, and lead director. Executive chairs have a significant influence over company operations and are often held by CEOs who also hold the title. In contrast, non-executive chairs do not interfere in day-to-day matters and typically focus on board-related activities such as chairing meetings, setting agendas, and reviewing CEO performance. The choice of whether to have an executive or non-executive chair depends on various factors, including corporate governance, company size, and industry norms. Some companies, particularly those in the US, prefer the American model with an executive chair, while others, like those in the UK and Canada, follow the British model with a non-executive chair. There is ongoing debate about which model is preferable, with some arguing that having a lead independent director can provide valuable independence. Companies with both an executive chair and a CEO, such as Ford and Alphabet Inc., demonstrate the flexibility of this arrangement. In some cases, vice-chairs or deputy chairs are appointed to assist the chair and take over in their absence. The role of the chair in private equity-backed boards also differs from that in non-profit or publicly listed organizations. Occasionally, groups appoint a temporary chair to lead a single meeting.[47] In some organizations, the deputy chair holds a higher rank than the vice-chair, as there may be multiple vice-chairs but only one deputy chair.[48] This type of deputy chair title typically has an advisory role rather than an operational one (like Ted Turner at Time Warner).[49] Another definition of vice- and deputy chairs describes an executive who outranks or has more seniority than an executive vice-president (EVP). Changing sexist language involves creating new terms and proposals for replacement. Thorne and Henley (1975) argue that replacing words like "chairman" with "chairperson" can be an effective way to reduce sexism in language. Additionally, using gender-neutral terms like "assistant," "worker," or "officer" instead of "man" or "woman" is common practice in official writing and media. The removal of sexist words should not leave women with a limited vocabulary; rather, it's essential to introduce more positive and inclusive words for women to use. Some attempts have been made to modify sexist language, but these efforts alone may not be sufficient to eliminate sexism entirely. The usage of certain compounds has been a subject of controversy due to concerns about sexism. Some argue that words ending in -man inherently exclude females, while others view them as accepted and efficient conventions not intended to be gender-specific. Additionally, the use of chairmanship versus chairwoman can also generate debate. Some prefer using terms like chair or chairperson, which can apply to both men and women.
