# Minecraft recipe flower pot

The creative freedom in Minecraft lies in building various structures with endless possibilities. Its enduring popularity stems from this unique aspect. If you're interested in creating a flower pot, it's a relatively simple process available across most game versions and platforms. To craft one, you'll need a crafting table, furnace, and three bricks. Here’s a step-by-step guide to making flower pots: 1. **Crafting Table**: First, learn how to make a crafting table: - Gather 4 wood planks of any type. - Open the crafting menu and place the 4 planks in the grid. - Your new table will appear in the box on the right. Add it to your inventory for future use. 2. **Furnace**: With a larger crafting grid, you can now craft your furnace: - Gather 8 Blackstones or Cobblestones and place them in the outer squares of your grid, leaving the middle square empty. - Place fuel (like bamboo, wood, coal, kelp) on the left bottom box in your furnace menu and clay in the top left box. - Once your progress bar is filled, you'll have bricks to add to your inventory. Repeat this process until you have 3 bricks. 3. **Crafting Flower Pot**: Now that you have bricks: - Open your crafting table. - Place a brick in the first row’s first and third boxes and in the middle box of the second row, following the pattern exactly. - Your flower pot should appear on the right side of your crafting menu. To use or decorate your flower pot, simply place it on the ground and add plants or flowers on top. Frequently asked questions include: - What plants can be potted? Most small plants like flowers, tree saplings, dead bushes, bamboo, cacti (when planted), mushrooms, and fungi can fit in pots. - What do you need to make a flower pot? 3 bricks and a crafting table are essential. A furnace helps if you want to make the bricks yourself. For decorative pots, craft them from pottery shards by placing 4 shards in a diamond pattern on your crafting grid. The way you place the shards determines the decorated faces of your pot. You can also use a combination of shards and bricks for partial decoration. Want to create a flower pot in Minecraft? You can display fungi, mushrooms, and plants inside a flower pot! To craft one, you'll need some Bricks. Here's how: 1. Obtain 3 Bricks: Smelt clay balls to get started. 2. Open a crafting table: A 3x3 grid will appear. 3. Place the materials in the grid: * Row 1: Empty * Row 2: Brick, Empty, Brick * Row 3: Empty, Brick, Empty 4. Place the flower pot in your inventory: You'll see it on the right side of the crafting grid. You can use your flower pot to display: * One block high saplings, flowers, ferns, cacti, dead bushes, bamboo, azaleas, mangrove propagule, and roots * Repel hoglins with warped fungus Mushrooms, fungi, and various plants can be placed in pots. These plants include one-block-high flowers, saplings, ferns, dead bushes, cacti, bamboo, azaleas, mangrove propagule, and roots. To remove a plant from the pot, use the interact button. In Java Edition, flower pots can be placed on any block or over air. However, in Bedrock Edition, they must be placed on top of a full-block surface, a fence, stone wall, or hopper. Pots are 3⁄8 of a block high and can be stepped on. You cannot walk from the top of a flower pot onto a full-sized block without jumping, but you can jump from a flower pot onto a fence. This article discusses various types of potted plants and planters in Minecraft, including Potted Cactus, Potted Bamboo, and Potted Azalea Bush. It also covers the history of flower pots in the game, from their initial addition in Java Edition version 1.4.2 to their current functionality in Bedrock Edition. The article highlights that in Bedrock Edition, flower pots use specific block states, such as whether they are empty or contain contents. Additionally, it explains how to craft and place a Flower Pot, which requires the player to have a Flower Pot item in their inventory. Furthermore, the article touches on the history of flower pots in Minecraft, including when they were first introduced by Dinnerbone's tweet in August 2012. It also mentions updates that allowed players to place various types of plants, such as red tulips and poppies, into flower pots. The Flower Pot block has undergone several changes across various Minecraft updates. Initially, in version 14w06b, more blocks started to render inside flower pots than previously seen. However, a potted cactus model change was later reverted due to an error. In the update 14w07a, the iron trapdoor also rendered correctly within flower pots when created using commands. Later, with the 14w17a update, changes were made to the flower pot model and rendering, introducing directional shading for insides and removing ambient occlusion from the outer face. Additionally, invalid blocks no longer appear inside flower pots, including cobweb and grass. The update 16w39a allowed potted plants to be removed by pressing 'use' and introduced woodland mansion generation of flower pots. The update 18w44a brought texture changes for both flower pots and their contained plants. Cornflower, lily of the valley, wither rose, and bamboo could now be placed in flower pots. Further updates saw model fixes, new plant additions, and changes to potted poppies' textures. In the 19w11a update, mason villagers began selling bricks, making flower pots renewable. The model for flower pots has been fixed multiple times throughout the patches mentioned above. In various Minecraft updates, changes have been made to flower pots. Initially, they were found in suspicious gravel and sand in trail ruins, but this changed over time. As of Pocket Edition Alpha v0.12.1, flower pots now generate in witch huts, igloo basements, woodland mansions, new villages, and village mason chests. They can also be found naturally in these locations. The types of plants that can be placed in flower pots have expanded to include bamboo, cornflower, lily of the valley, withered roses, azalea, and flowering azalea. Players can now remove potted plants from flower pots by pressing use. In terms of item forms, the original "item" form of flower pots was removed in 1.7.21, but a new item form exists for the block itself, which is only accessible via the /give command or inventory editors. The textures of flower pots have been updated to improve their appearance, and they now generate in various biomes and structures, including villages. Flower Pots: A Decorative Block in Minecraft Trivia: The flower pot is based on a suggestion from Reddit, similar to ender chests and item frames. In the game, flower pots can be used to display plants. However, if you put a named plant in a flower pot, it will lose its name. The inside of the flower pot in Java Edition uses the center 4x4 pixels of the dirt texture, while Bedrock Edition uses the center 6x6. To craft a flower pot, you need three bricks and a crafting table. Simply arrange the bricks in a V shape on the crafting table to get a flower pot. You can also find flower pots in structures like witch huts, woodland mansions, and villages, and use them as decorative blocks. Once you've built your house, it's time to give it character and life by adding various decorative blocks, including the flower pot. Apart from flowers, you can also put other blocks inside the flower pots, making this block more versatile. We have a dedicated guide on how to make a flower pot and use it in Minecraft. So, let's start! To make a single flower pot, you need only 3 pieces of bricks and a crafting table. If you need help with making a crafting table, you can follow our guide linked above, where we've explained the process in detail. When it comes to the bricks, you can obtain them by smelting clay balls in a Minecraft furnace. To get clay balls, you can break the clay blocks without a silk touch Minecraft enchantment. Clay is generated in bodies of water throughout your world and in large quantities in the lush caves biome in Minecraft. Our guide about the furnace will also help you choose the fuel you want to use. You may also get the bricks from trading with Mason villagers, but it's a bit more complicated since they require emeralds. Now that you've got everything you need, let's look at the crafting recipe for the flower pot: First, select the crafting table in your hotbar and place it in your world by right-clicking on the ground. Then, right-click the crafting table block and its UI will open up showing you a 3 x 3 grid. To craft a flower pot, you first place one brick in the central slot of the first column. Then, place the second brick in the bottommost slot of the second column. Finally, place the third brick in the central slot of the third column. Note: When crafting a flower pot, you can also move the whole brick placement one slot up, and it won't change the output. As soon as you place the items in the right configuration, you will see a flower pot appear in the result slot on the right. You can just left-click on the item and move it from the crafting table to your inventory. Crafting is not the only way you can get flower pots; you can stumble upon them while exploring the world in your Minecraft seed. So, you can find a flower pot in block form in the following places: Witch Huts (swamp biomes) Basements of Igloos (snowy plains, snowy taiga, and snowy slopes biomes) Woodland Mansions (dark forest biomes) Villages (plains, savanna, desert, and taiga biomes) Furthermore, you don't need a specific tool to collect the flower pots; they can be broken with hand. It'll then drop itself, and a plant it's holding in half. They can be found in various locations such as Mason buildings, Trail Ruins, and Suspicious Gravel Blocks. The main use of flower pots is for decoration, allowing players to create visually appealing additions to their surroundings. They can also be used to display certain blocks without worrying about their properties. For example, cacti and wither roses won't deal damage when in a flower pot. Additionally, flower pots with no plant inside can resemble mugs or have other uses, such as near water wells.
