Ge fridge age serial number

Given text has been paraphrased below: Most older RCA appliances are no longer manufactured since 2002. If you own one of these older models, you can use the chart provided to determine the exact month and year it was made by looking at the serial number on your appliance. The serial number is what matters when trying to find out how old an appliance is, not its model number. The two-letter code at the beginning of the serial number tells you which month and year it was manufactured. The letters are paired with numbers in a chart that correlates them. For instance, if the first letter in your serial number is "G", then it means the appliance was made either in April 1989 or April 2001. There is also additional support available for GE appliances, where you can find out more about how to determine the age or manufacture date of your model by looking up their own guide. GE Refrigerator Serial Number Decoding: A Guide to Determining Age The serial number on each Bosch appliance, excluding the model number, contains crucial information about its production. The two-letter code preceding six numbers indicates both the month and year it was manufactured. The following chart explains this coding system: Letter | Month | Year -----|-----|----- A | January | 2025, 2013, 2001, 1989, 1977 D | February | 2014, 2002, 1990, 1978 F | March | 2015, 2003, 1991, 1979 G | April | 2016, 2004, 1992, 1980 H | May | 2017, 2005, 1993, 1981 L | June | 2018, 2006, 1994, 1982, 1970 M | July | 2019, 2007, 1995, 1983, 1971 R | August | 2020, 2008, 1996, 1984, 1972 S | September | 2021, 2009, 1997, 1985, 1973 T | October | 2022, 2010, 1998, 1986, 1974 V | November | 2023, 2011, 1999, 1987, 1975 Z | December | 2024, 2012, 2000, 1988, 1976 If the serial number begins with "GA," for instance, it signifies that the appliance was manufactured in April of either 2001 or 2013. It's worth noting that every twelve years, the sequence restarts from 'A', potentially causing duplications across different years. To verify the date of manufacture accurately, consult your Owner's Manual, which often includes a publication date printed alongside a unique identifier on its front or back page, resembling "02-20" (February 2020), "01-21" (January 2021), or "04/17" (April 2017). If this does not exactly match the month and year from your serial number but is close, it can confirm that you have identified the correct age. If there's still uncertainty about the manufacturing year, contact us with your model and serial number for further assistance. To determine the age or manufacture date of an appliance, you can look at its serial number. Hotpoint and Maytag appliances have unique serial number codes that reveal their build dates. For example, a serial number like LT221102 indicates that it was built in June 1998. Hotpoint's serial numbers use two letters to represent the year (e.g., T = 1986 or 1998) and a month letter (e.g., L = June). Similarly, Maytag appliances have a four-letter date code where the first letter is the year and the second letter is the month. Samsung appliances have more complex serial number codes that require specific patterns to decipher. For example, a 15-digit serial number with letters might indicate the production date by looking at the 8th and 9th digits (year) or 4th and 5th digits (month). For instance, a serial number like R2001 indicates a product made in the year 2001. It's essential to note that some appliances have similar-looking serial numbers, so it's crucial to physically inspect the product to determine its manufacture date. You can visit for more information on finding the manufacture dates of various appliance brands, including Maytag, Jenn-Air, MagicChef, Amana, Samsung, and Whirlpool. LRS, SF, LE, ET, EV, K, L, M, P, R, S, T, V, W, X, Y, A, B, D, E, F, G, H, J = specific years The provided text lists appliance serial numbers and corresponding possible manufacture dates. A website decodes and searches these numbers against internal data and the internet to determine the likely manufacturer date.
