Gencloben cream indications lumenex

Side effects of clotrimazole/betamethasone can include tingling sensations and skin reactions. Inform your healthcare provider about any issues you experience. Rarely, more serious side effects may occur, such as breathing difficulties, fever, swollen lymph nodes, or dizziness. Additionally, prolonged use can lead to adrenal insufficiency or Cushing's syndrome due to excessive cortisol levels. Other possible side effects include weight gain, skin thinning, acne, and high blood sugar levels. Use clotrimazole/betamethasone on damaged skin to maintain health. If you leak sugar in your pee, talk to your healthcare provider. Keep appointments for blood work and call if you feel: thirsty, peeing more than usual, hungry more, tired, sick to stomach, confused, or smelly breath. Also, see doctor if you have: cloudy vision, nearsightedness, color changes, glare problems, loss of vision, eye pain, headache, bright circles around lights.
