Easily convert your US English text into professional speech for free, perfect for e-learning, presentations, YouTube videos and increasing website accessibility. Our voices pronounce texts in their own language using a specific accent, with options for multiple speakers and downloadable MP3 files. For better pronunciation, leave spaces between sentences and adjust the speaking rate or pitch to suit your needs. You can also customize speech effects, such as whispered tones or faster/slower rates. For dramatic purposes, you might want to slow down the pace of your text or speed it up for a more urgent tone. Do you prefer synthesized speech with a higher or lower pitch? Explore Amazon SSML tags for customization options and learn how to switch between speakers within a text. Did you know that English can be a challenging language to learn, despite its simplicity in theory? However, with practice and the right resources, anyone can master it. One effective way is to find a friend who speaks English and engage in conversations to pick up on nuances and speech patterns. The AI TTS tool significantly surpasses free alternatives like Notevibes, TTSTree, and ttsmaker by allowing input of up to 100,000 characters, far exceeding the typical 500-character limit. It boasts support for numerous languages, including English, Vietnamese, French, German, Spanish, Arabic, Chinese, Japanese, Korean, and many more. Users have the option to choose between male and female voices, making it a versatile tool. Utilizing AI TTS is straightforward, involving steps such as entering the desired text, selecting the country and voice, clicking convert, waiting for processing, listening to the converted audio, and downloading the file for personal or commercial use. This tool is ideal for adding voiceovers to videos, creating audiobooks from ebooks, generating audio for novels, producing radio advertisements, and creating AI narration for YouTube videos, all while supporting text-to-speech conversion in multiple languages. Notably, it is optimized for natural and accurate Vietnamese pronunciation and supports over 50 other languages with comparable quality. Currently, in its beta testing phase, AIKTP's AI TTS is completely free for all users upon registration. It also supports reading content from Word files by uploading the file and automatically converting the content to speech. The tool is beneficial for both individual users and businesses, offering a high-quality, free text-to-speech solution with excellent Vietnamese support. The generated audio can be used on platforms like YouTube, TikTok, and Podcasts without attribution, although crediting the source is appreciated. Additionally, it supports a [delay] seconds format for pausing between sentences, enhancing user control over the audio output. With its latest Version 1.1, the tool optimizes speed, improves existing features, and introduces new options like Speed Control, Pitch Control, and Voice Control, allowing users to adjust and customize audio more precisely. These features enable changes to playback speed, pitch adjustment for unique effects or easier voice recognition, and voice quality adjustments for clearer and smoother audio. Version 1.1 also supports SRT (subtitle) format, enabling users to adjust the reading time of each sentence and providing flexibility, especially with subtitle-based content. Users can upload SRT files or copy and paste SRT content, with the system automatically detecting and adjusting the reading accordingly. Automatic Reading Time Adjustment Ensures Synchronization The system optimizes time, audio, and text length synchronization for enhanced user experience in educational videos, media products, and language learning applications requiring precise temporal accuracy. For each subtitle sentence, synchronization ensures a seamless viewing experience. Example of SRT formatted text: 1 00:00:00,740 --> 00:00:11,160 Hello 2 00:00:08,599 --> 00:00:14,120 Today I'd like to introduce the new AI tool 3 00:00:11,160 --> 00:00:17,680 That helps you read text content 4 00:00:14,120 --> 00:00:19,760 Completely free from AIKTP Text to speech MP3 in 100 languages and accents, with more than 800 voices. Free Text to Speech MP3 Generator Narakeet offers a free text to speech MP3 generator tool. Simply enter your text into the script field, select your preferred voice, and generate your MP3 file in no time. With high-quality sound and perfect pronunciation, you can easily create professional-sounding audio files for various purposes. Customization Options The Narakeet platform allows you to customize your speech speed, tone, and volume to suit your specific needs. Choose from a wide range of virtual voices and generate subtitles and closed captions if desired. Our advanced AI algorithms ensure that your audio files sound natural and professional every time. Cloud-Based Platform With our cloud-based platform, you can create, edit, and share your audio files from anywhere, at any time. Say goodbye to the hassle and frustration of recording and editing your own audio files. For distinguishing between human voices and computer-generated ones, these MP3 files offer flexibility and convenience as they can be played on various devices and platforms without special software. To save text-to-speech as MP3, select the format from the "Format" box during conversion or click the Plus button next to the voices for additional options. With Narakeet, you can convert text to voice MP3 free 20 times without registering. To download text-to-speech MP3 files, click the "Download" link after conversion or access your account page and open a recent project to get the file. You can also create M4A or WAV files using our text-to-voice generator, which features 800 realistic voices in 100 accents and languages. Our online MP3 generator is cloud-based, allowing access from anywhere, at any time. Start creating your text-to-audio MP3 files today! ElevenLabs is an AI audio platform that supports multiple programming languages, making it accessible to developers of all skill levels. It offers various use cases such as Text to Speech and AI Voice Generator. The platform provides a conversational AI solution with low latency, full configurability, and seamless scalability. It also offers a customized AI audio plan that fits individual budgets and scales with performance needs. ElevenLabs enables effortless voiceover production, unique voice cloning, and content dubbing across 32 languages to engage global audiences. The platform has received endorsements from creators who trust ElevenLabs for enhancing storytelling and expanding their reach. A free web app is available for generating high-quality speech in any voice, style, or language. The AI voice generator renders human intonation and inflections with exceptional fidelity, adjusting delivery based on context. ElevenLabs aims to enhance content creation, user retention, and customer interactions through its realistic, low-latency AI voice generator and audio tools. You can use this website as a free voice over generator for narrating your videos, emails, and other written content. You have the flexibility to adjust the pitch and speed of the generated speech to suit your needs. Additionally, if you have offline-compatible voices installed on your device, you can use this web app offline without an internet connection. Speechify is a text-to-speech platform that offers over 200 lifelike voices across 60+ languages, making it easy to simplify reading. You can listen to any written or digital content aloud and use it to speed read PDFs, books, articles, and more. Simply snap a picture using the app to scan written text and listen to any content read aloud in high-quality, natural-sounding voices. Share your favorite AI voices with developers at an affordable price. Use audio files for podcasts, audiobooks, IVR systems, e-learning, apps, and more. I'm thrilled to have this app! Growing up with dyslexia, it would've made a huge difference. Sir Richard Branson, Business Magnate I downloaded the app to read books about finance while working and it brought me to tears at my desk. Love the app. LEAHLIZ1989 As a lawyer and researcher, I read tons of PDF documents and this app has improved comprehension and speed for me. MGOETS9941 Initially skeptical, but with my attention issues, this program made reading documentation effortless. Well worth the premium dollars! Tony Howard AI voice is the synthesized speech created by artificial intelligence systems, enabling machines to communicate in a human-like way. This technology allows devices to produce natural-sounding voices that mimic those of real people. To use Speechify, one can download its mobile app for iOS or Android, access it through its web app on Windows or Mac, or utilize its extensions for Chrome and Microsoft Edge. The platform caters to a wide range of users, including seniors, students, professionals, and anyone who benefits from consuming written content in an auditory format. Speechify also features voice cloning technology, which permits the user to upload or record a short audio clip of any speaker (with their permission) and generate a digital replica of that voice. This capability enables users to listen to emails, PDFs, and websites read aloud in a personalized manner. The platform offers an AI Voice API/TTS API for developers, providing instant voice cloning capabilities among other advanced features such as streaming, SSML, emotional control, speech marks, and more. Users can access this API by creating an account and reviewing the extensive documentation available. For educational institutions and teams, Speechify provides special plans that allow bulk purchases of text-to-speech services. This service aims to enhance accessibility in education and improve student outcomes on a larger scale. Free TTS tools from various providers are powered by cutting-edge AI technology, delivering high accuracy and natural results for audio and speech conversions. These free tools offer access without hidden fees, subscriptions, or limits on usage, allowing users to convert and enhance audio files freely. Free TTS supports multiple file formats including MP3, WAV, FLAC, OGG, and more, ensuring compatibility with various file types for conversion and enhancement. It also features batch processing capabilities, enabling the conversion of multiple files at once, which can save time in large-scale projects. The user interface of Free TTS is designed to be quick and intuitive, allowing both beginners and professionals to navigate and complete tasks easily. Additionally, all uploaded files and results are cleared after about 12 hours, and no personal data is collected from users.
