Burton binding size guide

Burton Snowboard Binding & Boot Size Guide Binding Size: Small, Medium, Large (Men's UK) or Women's UK/US/Euro Burton products are known for their innovative designs and reliable durability. Burton stands out from other brands for their thoroughly tested hand-made boards and sustainable practices. Here are the top 5 best Burton bindings. 1. **Mission Binding**: Best-selling all-around binding, medium flex, perfect for progressing riders. Easy adjustments to straps and highbacks make it popular among all rider types. 2. **Step On Binding**: Easy compatibility with Burton's Step On boots, simple construction provides a seamless connection between board and binding. Medium flex bindings are responsive and comfortable. 3. **Freestyle Binding**: Soft strap binding suitable for beginners and intermediate riders. Great value for its price. 4. **Cartel Binding**: Intermediate to advanced binding with medium to stiff flex. Suitable for riders who want more control and performance. 5. **Malavita Binding**: Medium to stiff flex binding, perfect for experienced riders who need more response. When choosing the right binding, it's essential to consider your riding style and level. Burton bindings are known for their quality and durability, making them a great choice for any rider. The Burton Cartel Snowboard bindings offer aggressive maneuverability, making them suitable for riders who need to handle challenging terrain. These advanced bindings provide consistent feedback and support due to the one-material construction of their baseplates and highbacks. The Malavita bindings prioritize comfort, featuring softer foam on the inside and stiffer foam on the outside to reduce fatigue and allow for a natural stance. They also offer adjustable straps that can be flipped or set up in the stock way, giving riders more playfulness or power. The Burton Freestyle bindings cater to park riders and beginners looking to improve their skills, with a soft, playful flex allowing smooth transitions and comfortable landings. These bindings include added cushioning to reduce impact upon jumps, rails, and landings, and are compatible with most mounting systems. However, they may not be the best choice for advanced riders or those who need more aggressive control. The Step On bindings feature two front toe locks that secure riders in place for all-mountain riding. The release lever is simple to use and automatically resets itself when stepping out, making it convenient for in-between runs. These bindings work with various mounting systems and are available for men, women, and children. EST baseplates are only compatible with The Channel Mounting system. The Malavita bindings work with 2x2, 2x4, 3D, and Channel binding mount patterns. Not the best choice for new riders. Intermediate to advanced riders may opt for bindings with high impact durability, dynamic foam padding under footbed for a natural stance, and adjustability options like forward lean and canted shape. EST baseplates are only compatible with The Channel Mounting system. See the Malavita bindings here on Evo. When choosing snowboard bindings, consider your riding style, comfort, and the materials and construction of the bindings. For freestyle or free riding, look for softer bindings with smooth buckle transitions and foot molding straps. Technical all mountain or pow riding demand stiffer single material constructed bindings providing immediate response. Soft-medium flex bindings suit park laps, cruising, or beginner-intermediate riders. Medium-stiff flex bindings are ideal for advanced terrain, aggressive turn transitions, or high impact landings. Choose bindings made of a single material construction for immediate response and canted shape that naturally forms to your leg. Burton highbacks feature tool-less mirror adjustment for on-the-go precision and allow for forward or back lean adjustments. A forward lean increases control, while a back lean is more playful. Compatibility with snowboards is crucial, as different systems exist, including 2x4, 4x4, 3D, and The Channel. Most new Burton snowboards utilize the 3D binding system. The Channel mounting system requires EST bindings or discs for other bindings to make it work. Burton bindings are universally compatible with most boots, except for the Step On Bindings which require Step On Boots. Lacing systems include traditional laces or Boa. Beginners and intermediate riders should consider affordable options, \$125-\$200, while advanced riders may opt for higher-end models with premium features. Burton snowboard bindings come in various price ranges, with intermediate to expert riders expecting to pay between \$185 and \$300 for high-quality options. The cost increases as you move up the price ladder, but this investment will last for years due to Burton's commitment to producing durable hard goods. The table below lists recommended binding sizes for different snowboard models, including: * Good Company (small/medium) * Blossom (medium/large) * Cartographer (large) * Custom (various sizes and weights) * Flying V and X series (various sizes and weights) Each model has a corresponding weight range and boot size recommendation. The prices mentioned earlier are for the bindings themselves, but there may be additional costs associated with purchasing the snowboard.
