View larger. Put math to use in practical ways. View larger. Cool, Castle Graphics Keep Exercises Fun At the outset, players are welcomed to the castle and asked to enter their name and grade level. This information is stored, so it's easy for multiple players to set up characters on the same DS unit, making it a great choice for families on the go or students with their friends on the bus. Once they're ready to play, kids will start working through lessons as little green vampires, and they'll have the opportunity to progress through 10 different topics, learning new concepts, practicing them, and repeating lessons to ensure that they stick. They'll also be tasked with mastering brief quizzes that provide an incentive for practicing skills until they are perfect.Even Vampires Need Math for Everyday Tasks Whether it's arranging geometric blocks into Tangram animals, figuring out how far the monsters drove on their European road trip, solving mazes, or doing basic addition and subtraction to figure out the cost of items in a store, this game ties learning abstract concepts to concrete examples for better overall understand--and extra fun. More advanced students will even get a chance to earn stars and other rewards by racking up right answers to division and multiplication problems, just like they do in real classrooms. this game is geared to the 7-10 year old set. For a second grader, there are addition drills. For a third grader, multiplication drills. 4th graders get to review all those and get some division practice, although this is set up differently. I purchased for a 3rd grader who is learning multiplication. She had been slogging along doing mental repeated addition to get the answer. This game has been hugely motivating to her to practice the times table and in doing so, she has started to just *memorize* many of the answers, not have to work them out, which is the whole point.I have just a couple complaints. One, the game comes preset with 1st, 2nd, and 3rd place scores. I'm not sure how the game makers came up with these scores, but imho, they are unrealistic for the intended audience to achieve. And an 8 yo might get a little frustrated when it takes him 10 minutes to fill in a times table but he'd have to break 2 minutes to make 1st place. It would be SO much better if they tracked the users' scores so the user could see her completion times dropping each time she did the game. Forget how I did against some mystery computer score, how is the game helping ME?The other complaint, and it is minor, is the handwriting recognition. Not perfect, but we are learning what the system likes and doesn't like. This description was provided by the publisher. What you need to know This content is sold by Nintendo of Europe SE. Imagine - Champion Rider (Europe) (En,Fr,De,Es,It,Nl,Sv,No,Da) Nintendo DS By Tech Powered Dad | August 25, 2011 Please buy your Nintendo 3DS on Amazon and get free shipping! Video games have been a popular way for parents to encourage kids to learn math for a couple of decades now. It's easy to see why. Today's kids don't remember a time before even portable game systems, and it's often hard to pry those systems out of their hands. The Nintendo DS seems to especially have especially caught on as a system for educational games. Most likely the portable format and the touch screen are a big part of this, and the large number of younger gamers that the DS is popular with. There are a lot of educational titles for the DS, and DS math games seem to be especially popular. Here are some of the best selling math games for the Nintendo DS, with a short video of each one. Personal Trainer Math This is the most popular math game for the DS on Amazon. It's designed to help younger kids with flash card type problems in a more entertaining way. The game tracks your progress over time and even takes your attendance to keep you on track. Buy Personal Trainer Math on Amazon with free shipping. Brain Quest One of the nice things about Brain Quest is that you can buy it in a variety of paired grade levels. That means you can buy it in grades 1 and 2 up through grades 5 and 6. In addition to the standard math features and puzzles, this game adds the element of being able to unlock items by redeeming points you have earned. Buy Brain Quest on Amazon for less. Learn Math (and Learn Science) Learn Math, and its sequel Learn Science are designed for kids in 1st-4th grade. After setting up their own character, this game takes the unusual approach of letting students play as green vampires. There are a variety of puzzles and games that vary from solving straight addition, subtraction, multiplication, and division to tangrams to mazes. Like with some of the others, you can accumulate rewards for performing well. Purchase Learn Math on Amazon. Brain Age (and Brain Age 2) Brain Age is more than a math game, it's a series of mental puzzles. The graphics and sound are simple, the game play not hard to pickup, and yet people find it strangely addicting. At the end of the series of game challenges, you are told what your "brain age" is. Obviously, as popular as the original was, there had to be a sequel, Brain Age 2. This one is for "kids" of all ages. Buy Brain Age at Amazon for the best price. Big Brain Academy This game has been compared to Brain Age, in that it offers a variety of games and puzzles and continually challenges you to improve your intellect over time. Much like Brain Age, it's not just about math, but students of math will find they have an advantage. The 15 puzzles and games of Big Brain Academy include memory, logic, analysis and math. Purchase Big Brain Academy on Amazon cheap. Please buy your Nintendo 3DS on Amazon and get free shipping! ** If you buy through this link, a percentage of your purchase will support my work at Tech Powered Math at no additional cost to you.
