Authentic arcade performance starts with SANWA. Crafted in Japan with exacting standards, SANWA joysticks and buttons deliver the speed, control, and reliability demanded by professionals and enthusiasts alike. Experience tournament-grade hardware trusted by the world’s best players. Upgrade your gaming rig with SANWA’s most in-demand components. Whether you’re building from scratch or modding a classic, these popular picks deliver competitive edge, comfort, and long-lasting performance. A complete kit straight from Japan, this bundle combines SANWA’s best-selling JLF-TP-8YT joystick with eight ultra-responsive OBSF-30 push buttons. Perfect for custom builds or replacing stock components, this kit delivers quiet, smooth action and rapid response. With interchangeable ball tops and 4/8-way switchability, precision becomes personal. This original SANWA joystick is built for precision play. With a firm spring, high-tension center return, and 4- or 8-way compatibility, it’s a staple for fighting game setups. Its universal design fits most standard panels and popular controllers, making it a go-to for gamers seeking durability and exact control. Upgrade your SANWA JLF joystick with the GT-Y octagonal restrictor gate. Designed for enhanced 8-way movement, this authentic SANWA part delivers smoother transitions between directions, making combos and diagonal inputs easier and more consistent – a must-have mod for serious players. Founded in 1982 in Tokyo, Japan, SANWA Denshi Co., Ltd. has established itself as a global leader in manufacturing high-quality arcade components. Renowned for their precision engineering and durable construction, SANWA parts are widely used in commercial arcade cabinets, competitive gaming setups, and high-end custom fight sticks. With decades of expertise, SANWA continues to define the gold standard in arcade controls for both casual and professional use. SANWA’s joystick and button components are the top choice for major arcade operators and tournament organizers around the world. Their iconic JLF series joystick and OBSF/OBSN pushbuttons are known for their responsiveness, smooth actuation, and long-lasting performance. These components are used in some of the most prestigious fighting game tournaments, such as EVO and Capcom Pro Tour events, where reliable input and speed are critical. Every SANWA joystick and button is built with precision in mind. The JLF-TP-8YT joystick, for example, is highly customizable with interchangeable gates and shafts, making it ideal for fine-tuning performance in games like Street Fighter, Tekken, and Guilty Gear. The buttons offer a light touch and quick rebound, which is essential for rapid input and competitive combos, giving players an edge in fast-paced gameplay. SANWA takes pride in using premium materials and rigorous quality control to ensure consistency and reliability. Their components are designed to endure millions of inputs without loss of performance, making them a trusted choice for arcade cabinets and high-traffic gaming environments. SANWA continually innovates while maintaining the traditional Japanese craftsmanship that has earned them their reputation. As someone who trains competitive fighting game players, SANWA is non-negotiable. It’s the industry standard for a reason. Every input feels crisp, fast, and consistent. No surprises mid-match, just total control. Whether coaching at locals or on the EVO stage, SANWA gear never lets the team down. My first custom stick ran SANWA. Ten years later, it still does. There’s just no substitute. From the snap-in buttons to the mod-friendly JLF joysticks, every component is made for modders who care about both feel and function. SANWA is the heart of every serious build I do. Restoring cabinets from the 90s to modern standards? Only SANWA. The parts are authentic, fit seamlessly, and hold up better than anything else I’ve tried. Their JLF series is a workhorse—fluid motion and tough as nails. It’s not just a brand; it’s a benchmark for arcade authenticity. E komo mai, Welcome to Paradise Arcade Shop Product Name Price Sanwa Actuator JLF-P-5 Sanwa JLF-P-5 Actuator is used in JLF-TP series. The actuator located at the bottom of the joystick shaft. It locks the centering spring into position and activates the microswitches. Price \$34.15 \$32.95 On Sale! Sanwa Metallic Gold Ball Top LB-35-AUPrice \$4.95 Sanwa Metallic Gun Metal Ball Top LB-35-GMPPrice \$4.95 Sanwa Metallic Silver Ball Top LB-35-AGPrice \$4.95 Sanwa Pink Ball Top LB-35-PPrice \$2.75 Sanwa Royal Blue Ball Top LB-35-MBPrice \$2.75 Sanwa White Bat Top LB-30N-WPrice \$4.95 Sanwa GTX-Y Octagonal Restrictor PlateThis restrictor plate has 8 corners to easily make smooth and precise combination moves in fighting games. For use on the Sanwa JLF & J LX joysticks. This item is a replacement for the older GT-Y restrictor plate. Functionally there is no difference, the primary change is how the yellow insert mounts into the clear housing.Price \$4.95 Sanwa GTX-VI Round Restrictor PlateThis round restrictor plate has a circular center for smooth 360-degree movement of the joystick. For use on the Sanwa JLF & J LX joysticks.Price \$4.95 Sanwa GTX-B Square Mod Type 2 Restrictor PlateThis restrictor plate has rounded corners but what makes it unique is the top and bottom are smooth (no ridges like the Type 1 GTX-R) but it still has ridges on the left and ride sides, so when used with fighting games you still have defined locations for left/right movement but smooth rotation at the top/bottom. Note: Of course it can be installed in different directions, so if it does not work as expected be sure to check the rotating of the inner ring to put the corner and ridges where you want them. For use on the Sanwa JLF & J LX joysticks.Price \$4.95
