

I'm not a robot

===== Oh dear newbie! Welcome to Reddit, where you can create an account and join a world of vibrant communities. Please note that some content on this site may be sensitive or adult-oriented, so make sure to log in and confirm your age before proceeding. To get started, you need to set up your Stremio app to stream movies/TV from various devices. However, if you're using an iOS device like iPhone or iPad, this guide won't help you - it's not compatible with those devices. You can use this configuration on Windows, Mac, Android, FireOS (including Fire Stick and Fire TV), Linux, AndroidTV, and even the Steam Deck. Before setting up Stremio, make sure to go through the required setup steps on a compatible device. For FireOS devices, you'll need to follow additional information that's located below. Here are the steps to set up Stremio: 1. Go to StremioAddons 2. Follow the Stremio setup guide (Part 1 and Part 2) 3. Sign up for Real Debrid and choose a package 4. Set up Torrentio Lite - Stremio Addon For FireOS devices, watch this video on how to install Stremio: On Linux, use the flatpak, and everything should work fine. IMPORTANT NOTESLooking back at my own personal experience with the setup process of Stremino, Torrentio, and Real Debird, it's amazing how far I've come. Six years ago, I purchased this skirt which has been a staple in my wardrobe ever since u/justjessx19 long time now
