Pairing Your Blyss Doorbell: A Step-by-Step Guide ===== Shop now >> Use, set-up, mount, optimize, repair, find error codes, schematics, exploded views for : BLYSS B804 > Blyss doorbell pairing process is not that hard to do. You can pair it with your smartphone using the Blyss app. First you need to download and install the Blyss app on your phone. Then open it and select your device type (in this case we will say "doorbell"). Now select the option to connect to Wi-Fi network, enter your network password, and then you can test camera functionality by hitting the "test" button. Now that you have connected your doorbell to your smartphone, you need to pair it with other devices in your home. For this purpose, you will use a smartphone app. First download and install Blyss app on your phone. Then open it and select your device type (in this case we say "doorbell"). Now select the option to connect to Wi-Fi network, enter your network password. Once connected, you can test camera functionality by hitting the "test" button. Blyss doorbell can be controlled remotely using the Blyss app on smartphone or tablet. The user can see who is at the door and speak through it when he/she/it wants to answer the door without opening it. The doorbell also have an alert feature that can send you notifications if there's a person standing in front of your door. To use this feature, you need to have smartphone app installed on your phone/tablet and be connected to Wi-Fi network. You can then see who is at the door, receive notification or answer call using audio button.
