What you need to know about Shared-MODs *How to install (click the spoilers to read)* Signed APKs do work on all Android devices (rooted + non-rooted). Signed APKs are in the most cases the only provided files by the mod publisher as they work for everyone. 1.) Remove the original game/app. 2.) Download the MOD APK. 3.) Install the downloaded MOD APK. 4.) Enjoy. Regarding login methods, please note that logging in with Google will not be possible when using signed MODs. Facebook login (if available) is possible, but it requires you to remove the Facebook application from your device. Other game-specific login methods (if available), such as email, transfer code or guest login usually work fine. Notes: - If you used our MOD APK before and just want to update, you can install the new MOD APK on top of the old without removing the game/app first. - In-App purchases are not possible on signed APKs as they require Google services similar to the Google login process. Unsigned APKs do only work on rooted and patched devices/environments. These are not always provided by the mod publisher as they do only work under certain circumstances. 1.) Your device must be rooted. 2.) Your device must be patched to ignore app signatures. This can be done with the help of tools such as Luckypatcher or Xposed. Once you fill that requirements the process is the same as with signed APKs with the difference that you can overwrite the original game/app with the MOD APK without removing it first. 1.) Download the unsigned MOD APK. 2.) Install the unsigned MOD APK. 3.) Enjoy. Note: For the case the unsigned APK does fail to install: Your device patch is not done correctly! Login methods and In-App purchases on unsigned MODs function the same as in the original game. Logging in with Google works without issues. Keeping the Facebook application installed is also no problem. You are rooted and want to know how to patch your device?
